

# Table of Contents

---

About the authors .....	ix
Preface .....	x
Foreword .....	xi
1. Target public and prerequisites .....	xi
2. Source code of examples .....	xii
<b>Getting Started .....</b>	<b>1</b>
<b>1. Preview of Scilab .....</b>	<b>2</b>
<b>2. The Console .....</b>	<b>9</b>
2.1. Taking ownership of the interface .....	9
2.2. Using the console .....	12
<b>3. The Graphical Interface .....</b>	<b>14</b>
3.1. The online help .....	14
3.2. The text editor .....	17
3.3. Other windows .....	19
<b>4. Inputs/Outputs .....</b>	<b>23</b>
4.1. File system .....	23
4.2. System commands .....	25
4.3. CPU dates and times .....	28
4.4. Command history .....	31
<b>5. Finding Information on Scilab.....</b>	<b>34</b>
5.1. Documentation on the Scilab website .....	34
5.2. Mailing Lists .....	35
5.3. Keeping track of bugs with Bugzilla .....	35
5.4. Supplementary modules on Forge .....	37
<b>6. Downloading and Installing Scilab .....</b>	<b>40</b>
6.1. Where to find Scilab? .....	40
6.2. Installation .....	43
6.3. Executables and launch options .....	45
<b>Computing .....</b>	<b>48</b>
<b>7. Numbers and First Calculations .....</b>	<b>49</b>

7.1. Floating point numbers .....	49
7.2. Elementary mathematical functions .....	51
Functions of one variable .....	53
Functions of several variables .....	54
Common rounding functions .....	54
7.3. Integer formats .....	57
<b>8. Variables, Constants and Types .....</b>	<b>59</b>
8.1. Creating variables .....	59
8.2. Mathematical constants .....	62
8.3. Advanced variable management .....	64
<b>9. Matrices .....</b>	<b>69</b>
9.1. Creating and modifying .....	69
9.2. Element-wise and matrix operations .....	80
9.3. Element-wise and matrix functions .....	85
9.4. Solving systems of linear equations .....	88
<b>10. Booleans .....</b>	<b>93</b>
10.1. Comparison operators and logical operators .....	93
10.2. Boolean matrices .....	97
<b>11. Character Strings and Text Files .....</b>	<b>102</b>
11.1. Creating and displaying character strings .....	102
11.2. Manipulating strings .....	105
<b>12. Other Common Types .....</b>	<b>110</b>
12.1. Polynomials .....	110
12.2. Rational fractions .....	112
12.3. Lists .....	114
Creating and manipulating lists .....	114
Displaying lists as arrays .....	116
Indexing fields with character strings .....	119
Typed lists .....	119
12.4. Hypermatrices .....	120
<b>13. Calculation Examples .....</b>	<b>123</b>
13.1. Creating vectors and matrices .....	123
13.2. Solving calculations related to series .....	127
13.3. Creating a complicated matrix .....	128
13.4. Creating a sudoku .....	131

<b>Programming .....</b>	<b>134</b>
<b>14. Scripts .....</b>	<b>135</b>
14.1. Writing and executing scripts .....	135
Executing a script .....	136
Setting the results display .....	138
Halting the execution of a script .....	141
Scilab startup and shutdown scripts .....	143
14.2. Dialog boxes .....	143
<b>15. Control Flow Statements .....</b>	<b>149</b>
15.1. Conditional structures .....	149
<i>if, then, else</i> .....	149
<i>select, case</i> .....	151
<i>try, catch</i> .....	153
15.2. Loops .....	154
<i>while</i> .....	154
<i>for</i> .....	155
Force a loop to continue or terminate .....	158
<b>16. Functions .....</b>	<b>162</b>
16.1. Defining a function .....	162
16.2. Function calling sequence .....	167
16.3. Scope of variables and arguments .....	170
<b>17. Advanced Programming .....</b>	<b>175</b>
17.1. Error handling .....	175
17.2. Function optimization .....	181
17.3. Object-oriented programming .....	184
17.4. Documenting your functions .....	190
<b>18. Example: Programming a Sudoku Game.....</b>	<b>193</b>
18.1. Functional programming .....	194
18.2. Solving a game of sudoku .....	200
18.3. Solving a sudoku automatically .....	208
<b>Creating Plots .....</b>	<b>211</b>
<b>19. Graphics Entities and Windows .....</b>	<b>212</b>
19.1. Variables of type <i>handle</i> .....	213
19.2. First handle examples .....	217

19.3. Handle Properties .....	221
19.4. Working with several graphics windows .....	227
19.5. Exporting and saving plots .....	231
<b>20. Two-dimensional Plot .....</b>	<b>233</b>
20.1. Plotting with the <i>plot</i> command .....	233
Zooming .....	238
Plotting several curves with one command .....	242
20.2. Titles, grids, legends and colors .....	243
Adding labels .....	243
Color management .....	245
Changing the environment color .....	247
Marker management .....	248
Plotting error bars .....	248
20.3. <i>plot2d</i> command and other types of plots .....	250
Curve of type $y = f(x)$ .....	252
Plotting curves as step functions, vertical bars or arrows .....	253
Curves defined by a polar equation .....	254
<b>21. Three-dimensional Plots .....</b>	<b>256</b>
21.1. View angle .....	256
21.2. Curves in 3D space .....	260
21.3. Facets and surfaces .....	261
21.4. Plotting functions of two variables .....	271
21.5. Parametric surfaces .....	277
21.6. Representation of 2D surfaces .....	283
<b>22. Other Two-dimensional Geometrical Elements .....</b>	<b>290</b>
22.1. Rectangles .....	290
22.2. Ellipses .....	293
22.3. Polygons .....	295
Drawing a filled polygon .....	296
Drawing several polygons .....	298
Drawing a regular polygon .....	299
22.4. Arrows and segments .....	300
22.5. Vector fields .....	302
22.6. Histograms and other charts .....	305
Generating bar charts .....	306
Creating grouped or stacked bar charts .....	307
Creating pie charts .....	308
Creating histograms covering given intervals .....	309

Creating 3D histograms .....	311
<b>23. To Go Even Further .....</b>	<b>312</b>
23.1. Adding text to figures .....	312
Choosing a font .....	314
Inserting LaTeX or MathML formulas .....	316
Positioning text .....	318
Adding a title or title page .....	321
Labeling coordinate axes .....	323
23.2. Creating animations .....	324
Exporting an animation .....	325
Improving the animation's smoothness .....	326
Generating an animation without using loops .....	328
Animating a plot .....	330
23.3. Interacting with the graphics window .....	331
Retrieving a point's coordinates .....	331
Differentiating different types of clicks .....	332
Retrieving all moves and clicks .....	334
Parameterizing your own functions to retrieve events linked to the mouse .....	335
23.4. Creating your own graphical interfaces .....	337
Parameterizing a graphical interface window .....	337
The main elements of a graphical user interface .....	338
Attaching a task to an event .....	342
Automatically refreshing the elements of a GUI .....	345
Adding menus to the graphical user interface .....	350
<b>24. Two Case Studies: a Pendulum and Comet Orbit .....</b>	<b>353</b>
24.1. The spring pendulum .....	353
24.2. Simulating a comet's orbit .....	360
Index (commands excluded) .....	375
Commands .....	381
